Initial Measured Resources Estimate at Eureka

10:13 27/9/2002

No. 6223826 / 00318661

CENTRAL KALGOORLIE GOLD MINES LIMITED

2002-09-27 ASX-SIGNAL-G

HOMEX - Perth

+++++

The directors of Central Kalgoorlie Gold Mines Limited (CKG) are pleased to announce an initial Measured Resource estimate from the Eureka Pit area. This does not include the recent drilling from the Eureka North area.

| CATEGORY | TONNES | GRADE | CONTAINED GOLD |
|----------|---------|---------|----------------|
| Measured | 250,000 | 4.8 g/t | 38,000 ounces |

Several parties have approached the company expressing their interest in exploitation of the near pit resource. The parties include respected gold mining companies with treatment facilities in the region. CKG welcomes these preliminary discussions and considers this development will be of benefit to shareholders.

The Measured Resource extends from 4145N to 4300N, between RL 360 (60 m below the surface) and RL 220 (200 m below the surface) and is open at depth over the strike length of 150m. The bulk of the resource lies beneath the depth of the old open pit (110 metres below the surface) with a wedge of mineralization extending 50 metres above the level of the pit floor in the immediate northern batter of the pit.

Further investigations are underway, including a pit optimization study to provide various development alternatives.

The resource occurs within a granted mining lease located approximately 50 km north of Kalgoorlie. Please refer to our web site www.centralkalgoorlie.com.au for further information. CKG currently holds a 50% interest in the Eureka tenements, with an options to acquire the remaining 50%.

The Company's objective is for the exploration and drilling of the Eureka project to be self funding and is hopeful that successful negotiations towards mining the resource will achieve this objective.

G Clark
COMPANY SECRETARY

Technical information contained in this report has been compiled by William D Goode. Mr Goode is a member of the Australasian Institute of Mining and Metallurgy with over 20 years' experience in the Australian mining industry and has sufficient experience relevant to the style of mineralisation and the type of deposit being reported on to qualify as a Competent person as defined in the 1999 Edition of the "Australasian Code for Reporting of Mineral Resources and Ore Resources."

**Further high grade intersection at Eureka North**

12:37 24/9/2002

No. 6223602 / 00317912

12

CENTRAL KALGOORLIE GOLD MINES LIMITED 2002-09-24 ASX-SIGNAL-G

HOMEX - Perth

+++++

The directors of Central Kalgoorlie Gold Mines Limited (CKG) are pleased to announce the intersection of further high grade mineralization at Eureka North.

CKG has received the results of a programme of close spaced drilling to test for high grade extensions in the immediate vicinity of ERC 39 (which as previously announced intersected shallow high grade mineralisation of 4 metres at 134.5 g/t Au). Two holes, ERC 46 and ERC 56 returned the following results:

- * ERC 46 4m at 33.7 g/t Au from 42m including 1m at 110 g/t Au:
- * ERC 56 1m at 25.5 g/t Au from 58m

The intersection in drillhole ERC 46 is approximately 35 metres from the surface and the mineralization is open up dip. The company plans further drilling to test this up dip extension in an attempt to establish the extent and orientation of this high grade supergene pod.

The distribution of high grades interspersed with low grade intersections reflects the extreme nuggety nature of the mineralization. A similar distribution of grade was recorded in shallow drilling in the main Eureka pit.

The company plans to follow up on broadly anomalous zones similar to those reported close, to the high grades in ERC 39, 46 and 56. These zones will be tested to check for possible high grade mineralization in their near vicinity.

The company anticipates that it will commence further drilling after it has fully evaluated the results of the current drilling programme and defined new drill targets.

The company also wishes to announce the results of further drilling in the northern batter of the Eureka open pit.

- *ERC 36 3m at 9.8 g/t Au from 57m including 1m at 24.8 g/t Au
- 5m at 3.9 g/t Au from 104m

The shallower intersection in ERC 36 is approximately 80 metres from the surface and points to presence of mineralization in the northern batter of the pit. The Eureka open pit historically produced 30,000 ounces at a reported grade of 4.5 g/t Au. The most recent production was toll treated at a nearby mill.

A resource estimation based on drilling north of and beneath the pit is being finalized and the company expects to be in a position to announce this resource estimate within the next two weeks.

Details of assay results and drill hole collar co-ordinates are attached.

Please refer to our website www.centralkalgoorlie.com.au for more information.

Follow Up Drilling Underway at Eureka - Progress Report

16:34 4/9/2002

No. 6222456 / 00313903

CENTRAL KALGOORLIE GOLD MINES LIMITED

2002-09-04 ASX-SIGNAL-G

HOMEX - Perth

+++++

The directors of Central Kalgoorlie Gold Mines Limited (CKG) announce that to date, 7 shallow RC holes have been completed out of a proposed total of 20. This program is on going and is designed to test for high grade extensions in the immediate vicinity of ERC 39 at Eureka North, which intersected shallow high grade mineralisation (4 metres at 134.5 g/t Au). Hole depths range from 54m to 71m and these additional drillholes are designed to test for mineralisation between 30m and 50m below the surface.

The company plans to deepen at least two of the holes previously drilled (ERC 39A and ERC 41) that failed to intersect the black shale horizon which is associated with the mineralisation in ERC 39.

The company anticipates that at least 13 additional holes will be completed within the next 2 weeks. The first batch of samples are being delivered to the assay laboratory, and assay results are anticipated to be received starting in 2 weeks time.

As previously announced in the Company's release of 29 August 2002, ERC 39 was the only hole drilled deeply enough to intersect the target horizon. The 5 remaining holes were not drilled deeply enough to intersect the black shale horizon associated with the mineralisation in ERC 39 and the lack of meaningful assay results confirms this conclusion.

Collar details of the first six holes drilled in the northern target zone are as follows:

| HOLE | COORDINATES | AZIMUTH | DEC | DEPTH |
|---------|-------------|---------|---------|-------|
| ERC 39 | 4916N, 588E | 270 deg | -60 deg | 91m |
| ERC 39A | 4916N, 609E | 270 deg | -60 deg | 76m |
| ERC 40 | 4916N, 628E | 270 deg | -60 deg | 109m |
| ERC 41 | 4826N, 567E | 270 deg | -60 deg | 73m |
| ERC 42 | 4826N, 587E | 270 deg | -60 deg | 93m |
| ERC 43 | 4826N, 608E | 270 deg | -60 deg | 116m |

Please refer to our website www.centralkalgoorlie.com.au for more information

Drilling Results - Eureka Project

13:21 29/4/2002

No. 6215163 / 00291704

CENTRAL KALGOORLIE GOLD MINES LIMITED

2002-04-29 ASX-SIGNAL-G

HOMEX - Perth

+++++

The directors of Central Kalgoorlie Gold Mines Limited (CKG) are pleased to announce the presence of high grade gold mineralisation associated with sulphides in sheared and altered volcanics approximately 170 metres below the surface (45 metres below the bottom of the existing open pit) at its Eureka Project.

The Eureka Project is located near Bardoc, 50 km north of Kalgoorlie in the Eastern Goldfields of Western Australia.

Highlights of the drilling results to date were:

Hole ERC 6 intersected 2 metres @ 23.2 g/t Au as part of an intersection of 11 metres @ 5.76 g/t Au.

Hole ERC 11 intersected 3 metres at 7.07 g/t Au as part of an intersection of 5 metres @ 4.49 g/t Au.

These holes are two of eleven Reverse Circulation Drillholes completed as part of an initial programme designed to investigate the possibility of additional ore beneath and along strike from the present open pit at Eureka. All holes have been drilled from sites within the open pit and were designed to test for mineralisation beneath the present pit.

Final assay results have been received for eight of the eleven holes drilled with gold mineralisation intersected in all holes. Coarse gold was observed in pan concentrates of some samples. Analysis by 1kg bottle rolls has been used as the most appropriate method considering the presence of this coarse gold. Assays reported are based the 1kg bottle rolls and supercede the results reported on 19 April 2002.

A detailed review of previous data indicates potential for extensions to the known mineralisation both north and south of the present pit. Following the receipt and evaluation of all drilling results, a second drilling programme will be undertaken.

Full details of completed assay results are as follows:

| DRILL HOLE | FROM | TO | INTERVAL | GRADE |
|------------|------|----|----------|-------|
|------------|------|----|----------|-------|

| | | | | |
|--------|------|------|-----|-----------------------|
| ERC 2 | 122m | 130m | 8m | 2.06 g/t Au including |
| | 122m | 123m | 1m | 6.40 g/t Au and |
| | 129m | 130m | 1m | 7.40 g/t Au |
| | 139m | 140m | 1m | 3.29 g/t Au |
| ERC 6 | 60m | 71m | 11m | 5.76 g/t Au including |
| | 65m | 67m | 2m | 23.20 g/t Au |
| | 89m | 91m | 2m | 3.67 g/t Au |
| ERC 7 | 59m | 60m | 1m | 1.85 g/t Au |
| | 91m | 92m | 1m | 3.88 g/t Au |
| ERC 10 | 74m | 76m | 2m | 3.76 g/t Au |
| ERC 11 | 57m | 62m | 5m | 2.18 g/t Au |
| | 70m | 75m | 5m | 4.89 g/t Au including |
| | 70m | 73m | 3m | 7.07 g/t Au |
| ERC 12 | 46m | 51m | 5m | 1.85 g/t Au including |
| | 46m | 47m | 1m | 4.49 g/t Au |
| ERC 17 | 54m | 55m | 1m | 2.38 g/t Au |
| | 79m | 80m | 1m | 6.05 g/t Au |
| ERC 18 | 35m | 36m | 1m | 2.70 g/t Au |
| | 59m | 60m | 1m | 2.58 g/t Au |
| | 65m | 67m | 1m | 1.76 g/t Au |

Results of the remaining three holes in this programme will be reported as soon as final assays have been received.

**Major gold discovery at north end of Eureka tenements**

12:40 26/8/2002

No. 6221868 / 00311885

CENTRAL KALGOORLIE GOLD MINES LIMITED

2002-08-26 ASX-SIGNAL-G

HOMEX - Perth

+++++

The directors of Central Kalgoorlie Gold Mines Limited (CKG) are pleased to announce a major high grade gold intersection of 4 metres at 134.5 g/t Au within 50 metres of the surface towards the north end of its Eureka tenements 50 kilometres north of Kalgoorlie. This is the first hole completed in a programme of six holes drilled to test this northern target.

Drillhole ERC 39 was collared some 600 metres north of the existing Eureka pit to test beneath a series of old workings in a zone of quartz veining and shearing.

FULL DETAILS OF ERC 39 ARE AS FOLLOWS:

| DRILL HOLE | FROM | TO | INTERVAL | GRADE |
|------------|------|-----|----------|----------------------|
| ERC 39 | 53m | 57m | 4m | 134 g/t Au including |
| | 53m | 55m | 2m | 255 g/t Au |

RESULTS FOR INDIVIDUAL SPLITS ARE:

| | | |
|---------|------|--------|
| 53m 54m | 163 | g/t Au |
| 54m 55m | 347 | g/t Au |
| 55m 56m | 25.6 | g/t Au |
| 56m 57m | 2.5 | g/t Au |

Samples were assayed using 24 hours bottle rolls on 1 kg samples.

The company is awaiting assays on the remaining 5 holes drilled in this programme. Results will be released to the market as soon as available.
